

How to use

Fastest non-invasive dermal delivery platform in the world.

DermaLayr Technology is a unique, bioactive delivery platform that rapidly and precisely delivers various active ingredients deep into the skin for benefits such as brightening, tightening, repair or hydration.

Step 1

Dampen your skin with water or a water based facial mist.

DermaLayr active film will absorb upon contact with damp skin.

Step 2

Remove clear protective layer.

Be careful not to touch the exposed active film with wet fingers.

Step 3

Apply the white active film firmly to your skin.

You should see and feel it absorbing immediately.

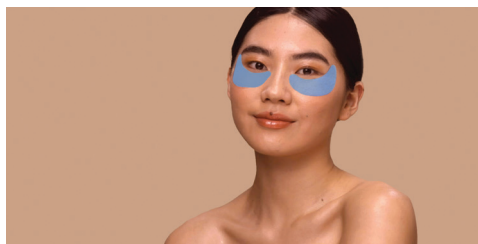

Step 4

Mist the application area.

Mist the application area further with water or toner to ensure full absorption.

Step 5

Wait 5 seconds.

We recommend waiting at least 5 seconds for the active film to fully absorb.

Step 6

Peel away.

DermaLayr active film has now delivered active ingredients deep into the skin's dermis, where they really work.
